Professional Summary

Pre-final year Computer Science student specializing in Artificial Intelligence and Software Engineering. Proficient in Java, C++, and Python with hands-on experience building full-stack AI applications and interactive game-based education systems. Proven ability to integrate NLP and cloud technologies (Google Cloud, Azure) into scalable projects.

Education

Technocrats Institute of Technology — Bhopal, India
Bachelor of Technology in Computer Science (AI) — *2023 – 2027*
- Core Coursework: Data Structures & Algorithms, Object-Oriented Programming (OOP), Artificial Intelligence, Software Engineering Fundamentals, Database Management Systems.

The Radiant School — Gwalior, India
Senior Secondary Education (Class XII) — *2022*

Technical Skills

Languages: Python, C++, Java, JavaScript, GDScript, HTML/CSS
Frameworks & Databases: FastAPI, React, MongoDB, JWT, Node.js
AI & Cloud: NLP, Generative AI, Speech-to-Text, Google Cloud, Microsoft Azure
Tools & Dev: Git/GitHub, Godot Engine, Salesforce CRM, VS Code

Projects

Qualif-AI: AI Interview Simulator | *FastAPI, React, MongoDB, NLP, Python* — 2025
- Engineered a high-performance full-stack AI simulator using FastAPI and React to automate mock interview sessions for technical candidates.
- Implemented Natural Language Processing (NLP) and Speech-to-Text processing to conduct real-time semantic analysis of candidate responses.
- Designed a scalable schema in MongoDB to manage user authentication, interview transcripts, and multi-dimensional performance metrics.
- Secured application workflows using JSON Web Tokens (JWT) for robust session management and user data protection.
- Developed a feedback dashboard that provides actionable insights on communication clarity, content accuracy, and confidence levels.

CodeQuest: Syntax Scrolls | *Godot Engine, GDScript, Python Education* — 2024
- Developed an immersive 2D RPG using the Godot Engine to gamify Python programming education for novice learners.
- Built core gameplay mechanics including combat and puzzle systems where player progression is tied to solving real-time coding challenges.
- Orchestrated complex system architecture including collision detection, sprite animation systems, and tilemap-based world design.
- Balanced educational pedagogy with game design to create a functional learning tool that teaches programming fundamentals through immersion.

Certifications

Google AI Essentials (2026)
Introduction to Generative AI | Google Cloud Skill Boost (2025)
Introduction to Responsible AI | Google Cloud Skill Boost (2025)
