PRAKHAR SHARMA

Bhopal, Madhya Pradesh, India — (+91) 7898634595 — theprakhar211@gmail.com
[LinkedIn] — [GitHub] — [Portfolio]

PROFESSIONAL SUMMARY

Computer Science & Engineering student specializing in AI systems and scalable full-stack development. Proven track record of architecting multi-agent workflows, robust developer tooling, and voice-first applications using FastAPI, React, and MongoDB. Passionate about applied AI engineering, developer tooling, and building intelligent, production-grade products.

EDUCATION

Technocrats Institute of Technology Bhopal, India
Bachelor of Technology in Computer Science (Artificial Intelligence) **2023 - 2027**

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Artificial Intelligence, Database Management Systems, Software Engineering.

The Radiant School — Senior Secondary Education (Class XII) Gwalior, India — **2022**

TECHNICAL SKILLS

- **Languages:** Python, C++, Java, JavaScript, GDScript, HTML/CSS
- **AI/ML & Orchestration:** LLMs, Generative AI, Multi-Agent Workflows, Prompt Engineering, Speech-to-Text, Llama 3, Groq API
- **Backend & APIs:** FastAPI, Node.js, REST APIs, JWT, Pydantic
- **Frontend & UI:** React, Next.js, Framer Motion
- **Databases & Cloud:** MongoDB, Google Cloud, Microsoft Azure
- **Tools & DevOps:** Git, GitHub Actions, CI/CD, Pytest, VS Code, Godot Engine

PROJECTS

Qualif-AI — AI Interview Simulator — *FastAPI, React, MongoDB, Llama 3* 2026 — [Live] — [GitHub]

- **Core Platform:** Built a voice-first full-stack mock interview platform featuring a 4-phase workflow with resume-aware question generation via Llama 3.3 70B.
- **Scoring Engine:** Engineered a hybrid evaluation pipeline combining LLM scoring, deterministic keyword coverage, and semantic similarity analysis to assess interview responses.
- **Guardrails & Reliability:** Secured endpoints against prompt injection using regex sanitization and stabilized pipelines with automated fallback handling for malformed LLM outputs.
- **DevOps & Testing:** Established a GitHub Actions CI/CD pipeline with 103 automated tests, intercepting 5 critical production bugs before deployment.

agAInst — AI Debate Platform — *Next.js, FastAPI, Llama 3, Framer Motion* 2026 — [Live] — [GitHub]

- **Multi-Agent Design:** Architected a multi-agent debate platform with dedicated Debater, Judge, and Analyzer LLM agents communicating through structured JSON workflows.
- **Performance Tuning:** Reduced API response latency by parallelizing analyzer LLM workflows via `Promise.all()` and implementing verdict caching.
- **State & Reliability:** Designed a stateless API architecture to process complete conversation histories safely with built-in automated retry logic for LLM parse failures.
- **Feature Set:** Implemented fallacy detection, PDF transcript export, and a local 2-player mode featuring a screen-blur turn handoff.

CodeQuest: Syntax Scrolls — *Godot Engine, GDScript, Python* 2025 — [GitHub]

- **Gameplay Systems:** Architected a 2D RPG where players solve puzzles by writing executable Python code evaluated safely via a custom in-game console sandbox.
- **System Architecture:** Designed modular subsystems for movement, dialogue, and quest management using data-driven design principles for seamless content scaling.
- **Extensibility:** Engineered extensible gameplay logic allowing new programming challenges to be added dynamically without modifying the core engine code.
- **Code Sandbox:** Built a custom evaluation engine that safely validates Python outputs, delivers targeted syntax execution feedback, and dynamically updates game states.

CERTIFICATIONS

- **Google AI Essentials** – Google (2026)
- **Introduction to Generative AI** – Google Cloud Skill Boost (2025)
- **Introduction to Responsible AI** – Google Cloud Skill Boost (2025)
